Tectonic Growth of a Collisional Continental Margin Kenneth D. Ridgway,2007 The convergent margin of southern Alaska is considered one of the type areas for understanding the growth of continental margins through collisional tectonic processes Collisional processes that formed this margin were responsible for multiple episodes of sedimentary basin development subduction complex growth magmatism and deformation Two main collisional episodes shaped this Mesozoic Cenozoic continental margin The first event was the Mesozoic collision of the allochthonous Wrangellia composite terrane This event represents the largest addition of juvenile crust to western North America in the past 100 m y The second event is the ongoing collision of the Yakutat terrane along the southeastern margin of Alaska This Cenozoic event has produced the highest coast mountain range on Earth Saint Elias Mountains the Wrangell continental arc and sedimentary basins throughout southern Alaska Active collisional processes continue to shape the southern margin of Alaska mainly through crustal shortening and strike slip deformation large magnitude earthquakes and rapid uplift and exhumation of mountain belts and high sedimentation rates in adjacent sedimentary basins This volume contains 24 articles that integrate new geophysical and geologic data including many field based studies to better link the sedimentary structural geochemical and magmatic processes that are important for understanding the development of collisional continental margins Publisher s website *12th International Palynological Congress (IPC-XII)* Germany); International Organisation of Palaeobotany. Exon,James P. Kennett,Mitchell J. Malone,2004-01-09

With the fragmentation of Gondwana the southern continents other than Antarctica drifted northward and the global climate changed. One of the two key separation points, Tasmania, Antarctica, the Tasmanian Gateway is the subject of this volume. What was the tectonic history of Tasmanian Gateway opening and how did gateway development impact sediments, ocean circulation and climate? The Cenozoic Southern Ocean Tectonics, Sedimentation and Climate Change Between Australia and Antarctica responds to such questions with new research and interpretations on three geological phases: the rifts before the gateway opened, the deepening gateway and changes in this part of the Southern Ocean as Australia moved northward from Antarctica.
