A Step-by-Step Guide to Applying the Rasch Model Using R Iasonas Lamprianou, 2024-12-17 This new edition provides a step by step guide to applying the Rasch model in R a probabilistic model used by researchers across the social sciences to measure unobservable latent variables Although the focus is on simple R code the book provides updated guidance through the point and click menus of BlueSky Statistics software The book covers all Rasch models frequently used in social sciences from the Simple Rasch model to the Rating Scale Partial Credit and Many Facets Rasch models Using a pragmatic approach to model data fit this book offers helpful practical examples to investigate Rasch model assumptions In addition to traditional Rasch model approaches it introduces the Rasch model as a special case of a Generalized Mixed Effects Model Readers will also benefit from the online support material which includes all the code used in the book in downloadable and useable files It also provides a comprehensive guide to R programming and practical guidance on using BlueSky Statistics software s point and click menus This dual approach enables readers to experiment with data analysis using the provided data sets enhancing their understanding and application of statistical concepts It will be a valuable resource for both students and researchers who want to use Rasch models in their research

Applying the Rasch Model in Social Sciences Using R Iasonas Lamprianou, 2019-12-12 This unique text provides a step by step beginner s guide to applying the Rasch model in R a probabilistic model used by researchers across the social sciences to measure unobservable latent variables Each chapter is devoted to one popular Rasch model ranging from the least to the most complex Through a freely available and user friendly package BlueSky Statistics Lamprianou offers a range of options for presenting results critically examines the strengths and weaknesses of applying the Rasch model in each instance and suggests more effective methodologies where applicable With a focus on simple software code which does not assume extensive mathematical knowledge the reader is initially introduced to the so called simple Rasch Model to construct a political activism variable out of a group of dichotomously scored

questions In subsequent chapters the book covers everything from the Rating Scale to the Many facets Rasch model The final chapter even showcases a complete mock manuscript demonstrating how a Rasch based paper on the identification of online hate speech should look like Combining theoretical rigor and real world examples with empirical datasets from published papers this book is essential reading for students and researchers alike who aspire to use Rasch models in their research

D-scoring Method of Measurement Dimiter Dimitrov, 2023-07-18 D scoring Method of Measurement presents a unified framework of classical and latent measurement referred to as D scoring method of measurement DSM Provided are detailed descriptions of DSM procedures and illustrative examples of how to apply the DSM in various scenarios of measurement The DSM is designed to combine merits of the traditional CTT and IRT for the purpose of transparency ease of interpretations computational simplicity of test scoring and scaling and practical efficiency particularly in large scale assessments Through detailed descriptions of DSM procedures this book shows how practical applications of such procedures are facilitated by the inclusion of operationalized guidance for their execution using the computer program DELTA for DSM based scoring equating and item analysis of test data In doing so the book shows how DSM procedures can be readily translated into computer source codes for other popular software packages such as R D scoring Method of Measurement equips researchers and practitioners in the field of educational and psychological measurement with a comprehensive understanding of the DSM as a unified framework of classical and latent scoring equating and psychometric analysis [HCI International 2020 - Late Breaking Papers: Digital Human Modeling and Ergonomics, Mobility and Intelligent Environments](#) Constantine

Evaluating Count Outcomes in Synthesized Single-case Designs with Multilevel Modeling Kirstie L. Bash, 2015 Complex statistical techniques such as multilevel modeling MLM ideally require substantial sample sizes in order to avoid assumption violations Unfortunately large between subjects sample sizes can be impractical and in some cases impossible in real world applications The use of single case designs SCD allow researchers to overcome this issue The ability to handle non normal outcomes appropriately in such single case designs however remains unclear especially when the outcome reflects recurrent event count data The purpose of this study is to evaluate the utility of MLM for evaluating recurrent event outcomes in synthesized single case designs More specifically this study seeks to determine the effects of analysis and analytic design decisions when distributional assumptions also vary as a result of the count outcomes The ability to properly model non normal distributions in school based or clinical research settings is critical for two reasons 1 count data are one of the most prevalent outcomes used in common single case designs and 2 it is necessary to avoid biased point estimates and standard errors Monte Carlo simulation was used to examine relative bias mean square error and confidence interval coverage rates across four simulation conditions distributional assumption degree of freedom methods sample size and time series lengths where the synthesis of two empirical data sets were utilized to represent the population parameters As hypothesized the Negative Binomial distribution performed better in comparison to the normal distribution and Poisson distribution on relative bias mean square error and coverage The Kenward Roger and Satterthwaite

degree of freedom methods resulted in coverage rates that were closer to the nominal 95 level than the between within residual and containment methods The results from the sample sizes and time series lengths were less straightforward than the other conditions The results from this study should be used to provide guidance for methodological decisions of synthesized single case design research However researchers should consider their own purpose and research context prior to making methodological decisions as a single analysis is insufficient for all applied situations

A Primer for Analyzing Nested Data Laura M. O'Dwyer, Caroline E. Parker, 2014 Analyzing data that possess some form of nesting is often challenging for applied researchers or district staff who are involved in or in charge of conducting data analyses This report provides a description of the challenges for analyzing nested data and provides a primer of how multilevel regression modeling may be used to resolve these challenges An illustration from the companion report The correlates of academic performance for English language learner students in a New England district REL 2014 020 is provided to show how multilevel modeling procedures are used and how the results are interpreted Step by step procedure for using the Advanced Statistics module of SPSS IBMStatistics is appended
