Morphological Structure, Lexical Representation and Lexical Access (RLE Linguistics C: Applied Linguistics)

Dominiek Sandra, Marcus Taft, 2014-01-10 The main concern of this work is whether morphemes play a role in the lexical representation and processing of several types of polymorphemic words and more particularly at what precise representational and processing level The book comprises two theoretical contributions and a number of empirical ones One theoretical paper discusses several possible motivations for a morphologically organised mental lexicon like the economy of representation view and the efficiency of processing view and lays out the weaknesses that are associated with some of these motivations The other theoretical paper offers an interactive activation reinterpretation of the findings that were originally reported within the lexical search framework The empirical papers together cover a relatively broad array of language types and mainly deal with visual word recognition in normals in the context of lexical morphology derived and compound words Evidence is reported on the function of stems and affixes as processing units in prefixed and suffixed derivations The role of semantic transparency in the lexical representation of compounds is studied as is the effect of orthographic ambiguity on the parsing of novel compounds The inflection derivational distinction is approached in the context of Finnish a highly agglutinative language with much richer morphology than the languages usually studied in psycholinguistic experiments on polymorphemic words Two other contributions also approach the study object in the context of relatively uncharted domains one presents data on Chinese a language which uses a different script type logographic from the languages that are usually studied alphabetic script and another one presents data on language production

University of Antwerp, 1994 *Morphologie* G. E. Booij, Christian Lehmann, Joachim Mugdan, 2000 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation To attain these objectives the series will aim for a standard comparable to that of the leading handbooks in other disciplines and to this end will strive for comprehensiveness theoretical explicitness reliable documentation of data and findings and up to date methodology The editors both of the series and of the individual volumes and the individual contributors are committed to this aim The languages of publication are English German and French The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks

however no inflexible pre set limits will be imposed on the scope of each volume The series is open ended and can thus take account of further developments in the field This conception coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care means that there is no set time table for the publication of the whole series Each volume will be a self contained work complete in itself The order in which the handbooks are published does not imply any rank ordering but is determined by the way in which the series is organized the editor of the whole series enlist a competent editor for each individual volume Once the principal editor for a volume has been found he or she then has a completely free hand in the choice of co editors and contributors The editors plan each volume independently of the others being governed only by general formal principles The series editor only intervene where questions of delineation between individual volumes are concerned It is felt that this modus operandi is best suited to achieving the objectives of the series namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume

Language Comprehension: A Biological Perspective Angela D. Friederici, 2012-12-06 Language comprehension and production is a uniquely human capability We know little about the evolution of language as a human trait possibly because our direct ancestors lived several million years ago This fact certainly impedes the desirable advances in the biological basis of any theory of language evolution Our knowledge about language as an existing species specific biological system however has advanced dramatically over the last two decades New experimental techniques have allowed the investigation of language and language use within the methodological framework of the natural sciences The present book provides an overview of the experimental research in the area of language comprehension in particular A biological perspective on language appears to be the common ground for all the contributors Their research view is based on the conviction that knowledge about the language system can be gained on the basis of empirical research guided by modifiable theories Each of the contributors reports and discusses the relevant work in hers or his specific field of research Each of the nine chapters in this book focuses on a different level or aspect of language comprehension thereby covering the level of input processes and word recognition the level of sentence processing as well as the level of text processing Aspects of structural representation and access to this representation are also discussed One chapter finally attempts to describe the neurobiological basis of the different aspects of the language comprehension process

Language Comprehension Angela D. Friederici, 2012-12-06 The second edition of the book on language comprehension in honor of Pim Levelt's sixtieth birthday has been released before he turns sixty one Some things move faster than the years of age This seems to be especially true for advances in science Therefore the present edition entails changes in some of the chapters and incorporates an update of the current literature I would like to thank all contributors for their cooperation in making a second edition possible such a short time after the completion of the first one Angela D Friederici Leipzig November 23 1998

Preface to the first edition Language comprehension and production is a uniquely human capability We know little about the

evolution of language as a human trait possibly because our direct ancestors lived several million years ago This fact certainly impedes the desirable advances in the biological basis of any theory of language evolution Our knowledge about language as an existing species specific biological system however has advanced dramatically over the last two decades New experimental techniques have allowed the investigation of language and language use within the methodological framework of the natural sciences The present book provides an overview of the experimental research in the area of language comprehension in particular

Morphologically complex words in the mind/brain Alina Leminen, Harald Clahsen, Minna Lehtonen, Mirjana Bozic, 2016-04-07 The question of how morphologically complex words are represented and processed in the brain has been one of the most hotly debated topics in the cognitive neuroscience of language Do complex words engage cortical representations and processes equivalent to single lexical objects or are they processed as sequences of separate morpheme like units Research on morphological processing has suggested that adults make efficient use of both lexical i e whole word storage and retrieval as well as combinatorial computation in processing morphologically complex words Psycholinguistic studies have demonstrated that processing of complex words can be affected both by properties of the morphemes and the whole words such as their frequency transparency and regularity Furthermore this research has been informative about the time course of complex word recognition and production and the role of morphological structure in these processes At the neural level left hemisphere inferior frontal and superior temporal areas and negative going event related potentials have been consistently associated with morphological processing While most previous research has been done on the recognition of morphologically complex words in adult native speakers much less is known about neurocognitive processes involved in the on line production of morphologically complex words and even less on morphological processing in children and non native speakers Moreover we have limited understanding of how linguistically distinct morphological processes e g inflectional versus derivational are handled by the cortical language networks This e book provides an up to date overview of the questions currently addressed in the field of morphological processing It highlights the significance of morphological information in language processing both written and spoken as assessed by a variety of methods and approaches It also provides a comprehensive range of research and development tools for the development of new technologies

Masked Priming Sachiko Kinoshita, Stephen J. Lupker, 2004-06-02 This book showcases the advantages of masked priming as an alternative to more standard methods of studying language

Morphology in the Reader's Mental Lexicon Dominiek Sandra, 1994 The work addresses the question whether morphemes play a role in lexical representation and processing Three hypotheses can be entertained i morphemes or a particular morpheme like the root might be needed to access a representation of the whole word or ii be used to express morphological relatedness at a postaccess level or iii be used to determine the meaning of the word These hypotheses are tested against experimental data on inflectional derivational and compound morphology The emerging picture is of a lexical

architecture with two parallel access routes one making use of whole word access representations and postaccess connections between morphosemantically related words and another one in which the meaning of the whole word is computed from its morphemes

Perceptual Linguistic Salience: Modeling Causes and Consequences Alice Blumenthal-Dramé, Adriana Hanulíková, Bernd Kortmann, 2017-06-05 Recent years have seen an upsurge of interest in the notion of salience in linguistics and related disciplines While in top down salience perceivers endogenously direct their attention to a certain stimulus in the bottom up salience it is the stimulus itself which attracts attention In prototypical cases of bottom up salience the stimulus stands out because it is incongruous with a given ground by virtue of intrinsic physical characteristics But a stimulus may also cause surprise by virtue of deviating from a cognitive ground e g when violating social or probabilistic expectations This has prompted researchers to examine the relationship between expectations and the perceptual salience of linguistic stimuli in new ways This e book features contributions from different scientific frameworks The reader will find commentaries reviews and original research articles on models of sociolinguistic and morphological salience the role of attention affect and predictability and on how salient items are processed categorized and learned Taken together the articles in this volume contribute to our understanding of how the perceptual salience of linguistic forms and variants can be theoretically framed and methodologically operationalized in different areas of linguistic processing

Morphological Aspects of Language Processing Laurie Beth Feldman, 2013-05-13 It is now well established that phonological and orthographic codes play a crucial role in the recognition of isolated words and in understanding the sequences of words that comprise a sentence However words and sentences are organized with respect to morphological as well as phonological components It is thus unfortunate that the morpheme has received relatively little attention in the experimental literature either from psychologists or linguists Due to recent methodological developments however now is an opportune time to address morphological issues In the experimental literature there is a tendency to examine various psycholinguistic processes in English and then to assume that the account given applies with equal significance to English and to other languages Written languages differ however in the extent to which they capture phonological as contrasted with morphological units Moreover with respect to the morpheme languages differ in the principle by which morphemes are connected to form new words This volume focuses on morphological processes in word recognition and reading with an eye toward comparing morphological processes with orthographic and phonological processes Cross language comparisons are examined as a tool with which to probe universal linguistic processes and a variety of research methodologies are described Because it makes the experimental literature in languages other than English more accessible this book is expected to be of interest to many readers It also directs attention to the subject of language processing in general an issue which is of central interest to cognitive psychologists and linguists as well as educators and clinicians
