Morphometrics With R Use R:

Morphometrics with R Julien Claude, 2008-12-15 This book aims to explain how to use R to perform morphometrics Morphometric analysis is the study of shape and size variations and covariations and their covariations with other variables Morphometrics is thus deeply rooted within statistical sciences While most applications concern biology morphometrics is becoming common tools used in archeological palaeontological geographical or medicine disciplines Since the recent formalizations of some of the ideas of predecessors such as Darcy Thompson and thanks to the development of computer technologies and new ways for appraising shape changes and variation morphometrics have undergone and are still undergoing a revolution Most techniques dealing with statistical shape analysis have been developed in the last three decades and the number of publications using morphometrics is increasing rapidly However the majority of these methods cannot be implemented in available software and therefore prospective students often need to acquire detailed knowledge in informatics and statistics before applying them to their data With acceleration in the accumulation of methods accompanying the emerging science of statistical shape analysis it is becoming important to use tools that allow some autonomy R easily helps fulfill this need R is a language and an environment for statistical computing and graphics Although there is an increasing number of computer applications that perform morphometrics using R has several advantages that confer to users considerable power and possible new horizons in a world that requires rapid adaptability

New Perspectives on Old Stones Stephen Lycett, Parth Chauhan, 2010-09-05 As the study of Palaeolithic technologies moves towards a more analytical approach it is necessary to determine a consistent procedural framework The contributions to this timely and comprehensive volume do just that This volume incorporates a broad chronological and geographical range of Palaeolithic material from the Lower to Upper Palaeolithic The focus of this volume is to provide an analysis of Palaeolithic technologies from a quantitative empirical perspective As new techniques particularly quantitative methods for analyzing Palaeolithic technologies gain popularity this work provides case studies showcasing these new techniques Employing diverse case studies and utilizing multivariate approaches morphometrics model based approaches phylogenetics cultural transmission studies and experimentation this

volume provides insights from international contributors at the forefront of recent methodological advances The Postcranial Anatomy of Australopithecus afarensis Yohannes Haile-Selassie, Denise F. Su, 2015-12-22 This volume describes a 3.6 million years old partial skeleton of *Australopithecus afarensis* from the Woranso Mille central Afar Ethiopia. This specimen is the first adult partial skeleton to be recovered since Lucy's AL 288-1 discovery in 1974. It is older than Lucy by 400,000 years and sheds light on the paleobiology of early *Australopithecus afarensis*, particularly the morphology of the shoulder girdle and thoracic shape which are thus far poorly understood and actively debated. The fauna associated with the partial skeleton tells us enormously about *Au. afarensis* paleoecology and gives us another piece of the puzzle regarding habitat availability and use for *Au. afarensis* outside the Hadar region where it has been well known for the last four decades.

3D Data Acquisition for Bioarchaeology, Forensic Anthropology, and Archaeology Noriko Seguchi, Beatrix Dudzik, 2019-06-14 *3D Data Acquisition for Bioarchaeology, Forensic Anthropology, and Archaeology* serves as a handbook for the collection and processing of 3D scanned data and as a tool for scholars interested in pursuing research projects with 3D models. The book's chapters enhance the reader's understanding of the technology by covering virtual model processing, protocols, alignment methods, actual data acquisition techniques, basic technological protocols, and considerations of variation in research design associated with biological anthropology and archaeology. Thoroughly guides the reader through the how to on different stages of 3D data related research. Provides statistical analysis options for 3D image data. Covers protocols, methods, and techniques as associated with biological anthropology and archaeology. *Statistics and Probability in Forensic Anthropology* Zuzana Obertová, Alistair Stewart, Cristina Cattaneo, 2020-07-28 *Statistics and Probability in Forensic Anthropology* provides a practical guide for forensic scientists, primarily anthropologists and pathologists, on how to design studies, how to choose and apply statistical approaches, and how to interpret statistical outcomes in the forensic practice. As with other forensic medical and biological disciplines, statistics have become increasingly important in forensic anthropology and legal medicine, but there is not a single book which specifically addresses the needs of forensic anthropologists in relation to the research undertaken in the field and the interpretation of research outcomes and case findings within the setting of legal proceedings. The book includes the application of both frequentist and Bayesian statistics in relation to topics relevant for the research and the interpretation of findings in forensic anthropology, as well as general chapters on study design and statistical approaches addressing measurement errors and reliability. Scientific terminology understandable to students and advanced practitioners of forensic anthropology, pathology, and related disciplines is used throughout. Additionally, *Statistics and Probability in Forensic Anthropology* facilitates sufficient understanding of the statistical procedures and data interpretation based on statistical outcomes and models which helps the reader confidently present their work within the forensic context, either in the form of case reports for legal purposes or as research publications for the scientific community. Contains the application of both frequentist and Bayesian statistics in relation to topics relevant for

forensic anthropology research and the interpretation of findings Provides examples of study designs and their statistical solutions partly following the layout of scientific manuscripts on common topics in the field Includes scientific terminology understandable to students and advanced practitioners of forensic anthropology legal medicine and related disciplines

Convergent Evolution Vincent L. Bels, Anthony P. Russell, 2023-03-01 This volume presents a series of case studies at different levels of inclusivity of how organisms exhibit functional convergence as a key evolutionary mechanism resulting in responses to similar environmental constraints in mechanically similar ways The contributors to this volume have selected and documented cases of convergent evolution of form and function that are perceived to be driven by environmental abiotic and or biotic challenges that fall within their areas of expertise Collectively these chapters explore this phenomenon across a broad phylogenetic spectrum The sequence of chapters follows the organizational principle of increasing phylogenetic inclusivity rather than the clustering of chapters by perceived similarity of the phenotypic features or biomechanical challenges being considered This is done to maintain focus on the evolutionary phenomenon that is the primary subject matter of the book thereby providing a basis for discussion among the readership about what is necessary and sufficient to justify the recognition of functional convergence All chapters stress the need for integrative approaches for the elucidation of both pattern and process as they relate to convergence at various taxonomic levels

Biological Shape Analysis Pete E. Lestrel, 2013 This proceedings volume describes the current state of research dealing with biological shape analysis The quantitative analysis of the shape of biological organisms represents a challenge that has now seen breakthroughs with new methodologies such as elliptical Fourier analysis quantitative trait loci analysis QTLs thin plate splines etc The volume also illustrates the diversity of disciplines that are actively involved in the characterization and analysis of the biological shape Some of the papers deal with the need to relate the underlying genome responsible for the actual observed characteristics of form Moreover many of the papers focus on the relationship of the shape to the processes that determine the biological form an issue of major continuing concern in biology This volume brings together for the second time practitioners from a variety of disciplines who have been concerned with the necessity of applying new methods to the analysis of biological shape Previous methodologies based on the conventional metrical approach distances angles and ratios have not been able to adequately capture OCo in quantitative terms OCo the subtleties and complexities of biological form due to its irregularity This volume represents an initial attempt to quantitatively characterize the biological form in both

Forey, 2002-02-07 Generally biologists and mathematicians who study the shape and form of organisms have largely been working in isolation from those who work on evolutionary relationships through the analysis of common characteristics. Increasingly, however, dialogue between the two communities is beginning to develop, but other than a handful of journal papers, there has been no formal published discussion on this subject. This timely book summarises the interdisciplinary work that has taken place and will stimulate additional research into these topics.
