Mortal Secrets Truth And Lies In The Age Of Aids:

Mortal Secrets Robert Klitzman, Ronald Bayer, 2004-12-01 In the era of the Internet and Oprah in which formerly taboo information is readily available or freely confided secrecy and privacy have in many ways given way to an onslaught of confession Yet for those who are HIV positive decisions about disclosure of their diagnosis force them to confront intimate fundamental and rarely discussed questions about truth lies sex and trust Drawing from interviews with over seventy gay men and women intravenous drug users sex workers bisexual men and heterosexual men and women the authors provide a detailed portrait of moral social and psychological decision making The interviews convey the complex emotions of love lust longing hope despair and fear that shape individual dilemmas about whether to disclose to deceive or trust others concerning this disease Some of those interviewed revealed their diagnosis widely others told no one Some struggled and ultimately told their partners others spoke in codes or half truths One woman discovered her husband's diagnosis in a diary when confronted he denied it Each year in the United States 40 000 new cases of HIV arise yet approximately one third of the 900 000 Americans who are infected do not know it As treatments have improved unsafe sexual behavior has increased and efforts at prevention have stalled Many of those infected continue to fear and experience rejection and discrimination Addressing broad debates about the nature of secrecy morality and silence this book explores public policy questions in the light of the nuanced private decisions that are shaping the course of an epidemic and have broader indications for all *The Impact of HIV/AIDS on Criminology and Criminal Justice* Mark M. The Shapes of Epidemics and Global Disease Andrea Patterson, Ian Read, 2020-08-28 This volume investigates the multifaceted SHAPES socio historic artistic political and ecological significance of global disease It challenges conventional views of infection and transmission by associating epidemics with ideologies and their accompanying institutions It argues that the physical threat of epidemics is irrevocably linked to culture economic resources social class and power Epidemics involve both the infected and non infected affect the local and global and they expose control and neglect This book provides a radical collaborative approach drawing contributors from closely related and vastly distant fields in the search for innovative ways to address human suffering and to find real solutions that may determine whether people live or die Such an approach is needed within an increasingly interconnected world where both pathological diseases and health behaviors are infectious Experts from fifteen diverse disciplines in the natural sciences social sciences and arts and humanities present case studies from across the world and time demonstrating the uniqueness of each disease and epidemic in its place but also the shared experiences that span human life and death In order to identify measure and control epidemics we must understand epidemics more as long biosocial processes than abrupt events in nature or culture Such methodology examines the meaning we attach to epidemics

as well as their material reality and provides a more complete understanding of how epidemics shape and are shaped
