Low Back Pain Dr. Erwin Gonzalez, MD,Dr. Richard Materson, MD,1997-12-01 Practice guidelines have recently become prominent as a response to rising health care costs reported regional practice variations and reports of inappropriate medical care They are now expected to meet a number of agendas including improvement of the quality of health care protection of professional autonomy reduction of litigation risk minimization of practice variation provision of standards for auditing medical records reduction of health care costs and therefore health care premiums defining areas of practice improvement in efficiency of practice and identification of inappropriate care The federal government has become particularly interested in guideline development and promotion of their development in the interest of rising health care costs and the extreme variation in medical practice noted nationally This volume is intended for all spine care practitioners It challenges its readers to weigh the recommendations of the authors against those of the Agency for Health Care Policy Research AHCPR Guideline Number 14 Acute Low Back Problems in Adults The chapters are personal opinions of the individual authors based on published scientific studies their own writings and more importantly their clinical experiences The author of each topic based chapter indicates agreement or disagreement with the guidelines and provides literature and

experience based reasons for their position Specific clarification of the references cited by the AHCPR is included where appropriate and newer literature available since the AHCPR guidelines were written is provided The reader is encouraged to attempt to understand the rationale of the guideline s authors and decide on the veracity of the guidelines versus the chapter author s or the reader s own information and experience In this manner a thoughtful reexamination of our thinking regarding the management of acute low back pain will occur and the missions of both the AHCPR and the editors of this book will be fulfilled Chapter 1 describes the backdrop for the proliferation of guideline development from a historical perspective outlines the methodologies used in development of guidelines and discusses the effectiveness of guidelines on patient care and practice behaviors Chapter 2 is an overview of practice guidelines in general The book is divided into several sections detailing assessment and management A significant portion of the book deals with diagnostic and therapeutic injection techniques in response to the growing popularity of these modalities Because the AHCPR guidelines rely on statistical odds that most acute LBP will resolve on its own the guidelines invoke a wait and see approach for the first three months unless red flags exist This is in sharp contrast to what the general medical community and patients with low back pain would generally opine Herein was the basis for the enormous counter reaction to the guidelines Because only a distinct minority of acute LBP patients present with frank radiculopathy and serious spinal conditions most patients with nonspecific LBP do fall into the group that will see resolution with a less aggressive approach However serious questions remain Will this approach do more harm than good Will adhering to the guidelines increase the likelihood of an acute episode of LBP turning into chronic LBP at greater suffering and expense to the individual and society Will patient satisfaction a recognized outcome measure erode because of this approach This volume provides the basis on which to evaluate these problems and their eventual resolution

MRI of Degenerative Disease of the Spine Paola D'Aprile,2014-11-08 This richly illustrated case based atlas thoroughly depicts the role of MR imaging in the

assessment of patients presenting with pain due to degenerative disease of the spine and will serve as an excellent guide to differential diagnosis. Importantly, generic radicular compression is the main reason for the painful symptomatology in only a limited number of cases and this book illustrates and emphasizes how various anatomic elements of the spine can be responsible. The imaging features of a range of disorders involving both the anterior and posterior elements of the spine are described, including active inflammatory osteochondrosis, atypical herniated discs, facet joint disorders, spondylolysis, and degenerative inflammatory changes of the spinal ligaments and posterior perispinal muscles. Each example is supported by clinical data and a series of unusual cases are also presented. MR study protocols include T2 weighted sequences with fat saturation and contrast enhanced T1 weighted sequences with fat saturation to allow better visualization or highlighting of various inflammatory changes in the spine. Radiologists, neuroradiologists, neurosurgeons, orthopedists, and rehabilitation physicians will all find this atlas a valuable asset in their practice.

MR Imaging of the Lumbar Spine Juergen Kraemer, Odo Koester, 2011-01-01 Two thirds of degenerative diseases of the vertebral column involve the lumbar spine. Magnetic resonance imaging plays a pivotal role in diagnosis and treatment. With more than 450 illustrations and 78 case studies illustrating various constellations of findings, this book provides a wealth of illustrations that guide the reader through the MR imaging of lumbar disk herniations and spinal stenosis. Impressive series of MR images illustrate both common and unusual findings, helping to enhance conceptual understanding and sharpen diagnostic perception. Clinical findings and progression are covered in addition to MRI findings, helping the reader to appreciate the correlations between clinical and imaging findings. The role of diagnostic imaging is addressed for specific disorders, helping to foster the more discriminating use of imaging procedures in the lumbar spine. The book concludes with a chapter on the current technique of performing CT guided injections at the lumbar level.

MRI of Degenerative Disease of the Spine Paola D'Aprile, Alfredo Tarantino, 2021-07-14 This is the second edition of an acclaimed, richly illustrated and comprehensive case-based atlas focusing on MRI of degenerative changes in the osteoarticular structures of the spine. Spinal degenerative disease is highly prevalent in the general population and its incidence increases with age. At the same time, degenerative spinal conditions are one of the most common causes of pain. The book presents a comprehensive overview of the MR findings observed in degenerative disease of spinal joints, ligaments, and paravertebral muscles and offers guidance on selecting the appropriate imaging protocol, which is critical in detecting the potentially very subtle changes. The MR study protocols presented include T2 weighted sequences with fat saturation and contrast enhanced T1 weighted sequences with fat saturation, since these sequences permit better visualization of inflammatory changes of both anterior and posterior elements of the spine. This richly illustrated second edition highlights the inflammatory component of the degenerative pathology of the spine, which in most cases is responsible for the painful symptomatology. It also discusses in detail the use of contrast medium in MRI of spinal degenerative disease. The case-based structure of the atlas allows easy but effective consultation by radiologists.
