Multidimensional Item Response Theory Multidimensional Item Response Theory:

Multidimensional Item Response Theory M.D. Reckase, 2009-07-07 Multidimensional Item Response Theory is the first book to give thorough coverage to this emerging area of psychometrics The book describes the commonly used multidimensional item response theory MIRT models and the important methods needed for their practical application These methods include ways to determine the number of dimensions required to adequately model data procedures for estimating model parameters ways to define the space for a MIRT model and procedures for transforming calibrations from different samples to put them in the same space A full chapter is devoted to methods for multidimensional computerized adaptive testing The text is appropriate for an advanced course in psychometric theory or as a reference work for those interested in applying MIRT methodology A working knowledge of unidimensional item response theory and matrix algebra is assumed Knowledge of factor analysis is also helpful Multidimensional Item Response Theory Wes Bonifay, 2019-12-10 Several decades of psychometric research have led to the development of sophisticated models for multidimensional test data and in recent years multidimensional item response theory MIRT has become a burgeoning topic in psychological and educational measurement Considered a cutting edge statistical technique the methodology underlying MIRT can be complex and therefore doesn't receive much attention in introductory IRT courses However author Wes Bonifay shows how MIRT can be understood and applied by anyone with a firm grounding in unidimensional IRT modeling His volume includes practical examples and illustrations along with numerous figures and diagrams Multidimensional Item Response Theory includes snippets of R code interspersed throughout the text with the complete R code included on an accompanying website to guide readers in exploring MIRT models estimating the model parameters generating plots and implementing the various procedures and applications discussed throughout the book Multidimensional Item Response Theory Mark D. parameter estimates obtained from two item response theory IRT models the 1 PL IRT model and the MC1 PL IRT model Several scenarios were explored in which both unidimensional and multidimensional item level and personal level data were used to generate the item responses The Monte Carlo simulations mirrored the real life application of the two correlated dimensions of Necessary Operations and Calculations in the basic mathematics domain In all scenarios the MC1 PL IRT model showed greater precision in the recovery of the true underlying item difficulty values and person theta values along each primary dimension as well as along a second general order factor The fit statistics that are generally applied to the 1 PL IRT model were not sensitive to the multidimensional item level structure reinforcing the requisite assumption of unidimensionality when applying the 1 PL IRT model

The Estimation of Multidimensional Item Response Theory Models Litong Zhang,2007 Multidimensional Item Response Theory Estimation James E. Carlson,1988 On Multidimensional Item Response Theory Tamás Antal,Educational Testing Service,2007 **Multidimensional Item Response Theory Estimation** James E. Carlson,1988 **Flexible Multidimensional Item Response Theory Models Incorporating Response Styles** Leanne M. Stanley,2017 A great deal remains to be explored in developing a useful general taxonomy of item response models such as the partial taxonomy presented in Chapter 2 for Likert type responses There is also much to be explored regarding when MIRT models from the divide by total and IRTree families may produce convergent vs divergent results and the conditions under which it may or may not be possible to specify conceptually similar models These very flexible model families have many potential applications for investigating the psychological meaning of rating scale data Multidimensional Item Response Theory Estimation James E. Carlson,American College Testing Program,1987 *Multidimensional Item Response Theory Estimation* Allen E. Doolittle,James E. Carlson,Judith A. Spray,Julie Noble,LeAnn M. Gamache,1987 *Assessing the Model Fit of Multidimensional Item Response Theory Models with Polytomous Responses Using Limited-information Statistics* Caihong Rosina Li,2018 *Recovery of Multidimensional Item Response Theory Data Structures Using Multivariate Analyses* Penny Elisha Nichol,2013 The primary goal of this study was to investigate whether the structure of data generated by the most commonly used multidimensional item response theory MIRT models could be identified by frequently used multivariate methods In item response theory IRT applications a multivariate analysis procedure typically is recommended prior to estimating a given IRT model to ensure that the proper type of model unidimensional vs multidimensional is used Therefore if IRT models are to be applied in testing practice it is important to demonstrate that these dimensionality identifying procedures succeed This study employed a 2 models for the multidimensional cases 3 number of dimensions 4 situations where the average discrimination parameters varied 2 test lengths model with 34 total cells Seventy five data sets were generated within each cell Data sets were analyzed with four different methods exploratory iterated principal factor analysis IPFA exploratory nonlinear factor analysis NLFA exploratory full information factor analysis FIF and nonmetric multidimensional scaling MDS Recovery of structure was determined

using two sets of criteria 1 fit statistics commonly used for each particular method and a statistic that was computed across methods root mean square residual RMSR and 2 a comparison of relative magnitude of estimated and true item parameters using Spearman rank order correlations Overall the data generation model true dimensionality and the method of analysis were the most important factors for determining recovery None of the methods recovered dimensionality well for all circumstances Based on dimensionality recovery NLFA best recovered unidimensional data IPFA best recovered two dimensional data and MDS using the RMSR statistic best recovered three dimensional data With regard to structure the NLFA and FIFA estimated values recovered the true parameters best

The Interpretation and Application of Multidimensional Item Response Theory Models ; and Computerized Testing in the Instructional Environment ,1989 This report summarizes the work in the development and evaluation of multidimensional item response theory models MIRT and in the evaluation of the use of computerized testing in the instructional environment The work on MIRT included the definition of descriptive statistics for items that require more than an ability for successful completion the evaluation of calibration programs the comparison of competing MIRT models and the application of MIRT procedures to practical testing problems The work on computerized testing investigated medium and order effects for classroom achievement tests in a military training setting and the feasibility of computerized adaptive testing in that setting Multidimensional item response theory MIRT is a theoretical framework for describing the interaction between a person and a test item when it is believed that performance on the test item is sensitive to person differences on more than one dimension kr
