reasons goods movement deserves and is increasingly receiving explicit consideration in urban transport policy and planning. Many cities around the world have conducted studies aimed at resolving urban goods movement problems and a considerable if disparate body of research results are available. This book brings together much of this knowledge and experience in a comprehensive source of information on urban freight particularly from a public policy or planning viewpoint. It provides both a conceptual basis for urban goods movement analysis and detailed practical guidelines which may be used directly by those responsible for urban freight policy and planning. The author has worked for over twenty years in this field and he draws upon his experience in Australia, the United States, Great Britain, Canada, and The Philippines to produce a book which is international in scope and perspective. The book is written for practising professionals such as engineers, economists, and planners working in local government, urban transport planning agencies, highway authorities, consultancies, or research institutes; it is also relevant to graduate courses in transport planning, traffic engineering, or urban policy. It is of interest to all who have a concern for contemporary issues in urban development.

Environmental Networks and Social Movement Theory Clare Saunders, 2013-04-11. Clare Saunders' book is an important contribution to the literature on social movements and environmentalism. Using the concept of environmental networks, it explores the extent to which social movement theory helps us understand how a broad range of environmental organizations interact. It considers the practicalities of social movement theories and it goes on to relate them to the practices of environmental networks. Theoretically and empirically rich, the book draws on extensive survey material with 144 UK environmental organizations as diverse as not-in-my-backyard (NIMBY) groups, reformists, conservationists, and radicals. Interviews with more than 40 key campaigners and extensive participant observation, particularly in London, focussing particularly on the crucial question of networking dynamics, the book reveals that there are broad-ranging network links across the movements' spatial and ideological dimensions. Combined with inevitable ideological clashes and a degree of sectarian rivalry, these links help produce vibrant environmental networks that together work to protect and/or preserve the environment. This book is an invaluable resource for anyone concerned with environmental issues, politics, and movements.
