Gastrophysics Charles Spence, 2017-06-20 The science behind a good meal: all the sounds, sights, and tastes that make us like what we're eating and want to eat more. Why do we consume 35 percent more food when eating with one other person and 75 percent more when dining with three? How do we explain the fact that people who like strong coffee drink more of it under bright lighting? And why does green ketchup just not work? The answer is gastrophysics, the new area of sensory science pioneered by Oxford professor Charles Spence. Now he's stepping out of his lab to lift the lid on the entire eating experience: how the taste, the aroma, and our overall enjoyment of food are influenced by all of our senses, as well as by our mood and expectations. The pleasures of food lie mostly in the mind, not in the mouth. Get that straight and you can start to understand what really makes food enjoyable, stimulating, and most important, memorable. Spence reveals in amusing detail the importance of all the off-the-plate elements of a meal: the weight of cutlery, the color of the plate, the background music, and much more. Whether we're dining alone or at a dinner party, on a plane or in front of the TV, he reveals how to understand what we're tasting and influence what others experience. This is accessible science at its best, fascinating

Molecular Gastronomy Hervé This, 2006-01-04 Taking kitchen science to a whole new molecular level, Hervé This is changing the way France and the world cooks. *Gourmet Bringing the Instruments and Experimental Techniques of the Laboratory into the Kitchen*, Hervé This, international celebrity and founder of molecular gastronomy, uses recent research in the chemistry, physics and biology of food to challenge traditional ideas about cooking and eating. What he discovers will entertain, instruct and intrigue cooks, gourmets and scientists alike. *Molecular Gastronomy* is filled with practical tips, provocative suggestions and penetrating insights. This begins by reexamining and debunking a variety of time-honored rules and dictums about cooking and presents new and improved ways of preparing a variety of dishes, from quiches and quenelles to steak and hard-boiled eggs. Looking to the future, This imagines new cooking methods and proposes novel dishes: a chocolate mousse without eggs, a flourless chocolate cake baked in the microwave. *Molecular Gastronomy* explains how to make them. This also shows us how to cook perfect French fries, why a soufflé rises and falls, how long to cool champagne, when to season a steak, the right way to cook pasta, how the shape of a wine glass affects the taste of wine, why chocolate turns white and how salt modifies tastes. A captivating little book. *Economist*. This book, praiseworthy for its scientific rigor, will hold a special appeal for anyone who relishes the debunking of culinary myths. *Saveur*. Will broaden the way you think about food. *The New York Sun*. A wonderful book; it will appeal to anyone with an interest in the science of cooking. *O Chef*.

The Science of Cooking Claudi Mans, 2019-09-17 I remember the early years of science as it applies to cooking and have seen how it has developed since then, with contributions as Nathan Myhrvold. Claudi Mans makes a new contribution in his book *The Science of Cooking*. A quick immersion offering a vision of what happens when we cook from the point of view of science while using clear and straightforward language. Harold McGee. An incisive and well-documented book that provides an entrance into the world of cuisine as seen through the prism of science. Ferran Adrià. This book of Professor Mans is an excellent description of some of the science that is important for cooking, told as science but through the eyes of a chef. David A. Weitz, Harvard University. In recent years, new products, new techniques and new cooking styles have entered the market with force. And at the same time, interest has grown in the relationship between nutrition, health and gastronomy. The sciences, biology, physics and chemistry, are the tools for understanding the entirety. Chemistry, in particular, describes what substances are responsible for color, smell and taste and why they change in cooking. On the other

hand the chemical and biological structures of animal and plant cells and tissues explain the textures and their changes in the kitchen In this book all these aspects are treated with every day and understandable language while it remains technically rigorous and provides a large amount of information With all this the reader will be able to know what is in their food before and after cooking it resulting in greater intellectual satisfaction added to the sensory [The Kitchen as Laboratory](#) Cesar Vega, Job Ubbink, Erik van der Linden, 2012-01-24 Eating is a multi sensory experience yet chefs and scientists have only recently begun to anatomize food s components introducing a new science called molecular gastronomy In this global collaboration of essays chefs scientists and cooks put the innovations of molecular gastronomy into practice
