Service-Oriented Computing Flavia Monti, Stefanie Rinderle-Ma, Antonio Ruiz Cortés, Zibin Zheng, Massimo Mecella, 2023-11-21 These two volumes constitute the proceedings of the 21st International Conference ICSOC 2023 held Rome Italy during November 28 December 1 2023 The 35 full papers and the 10 short papers included in this volume were carefully reviewed and selected from 208 submissions The volumes focus on cutting edge topics like artificial intelligence machine learning big data analytics the Internet of Things IoT and emerging technologies such as quantum computing blockchain chatbots and sustainable green IT solutions *GPU Parallel Program Development Using CUDA* Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN Contemporary High Performance Computing Jeffrey S. Vetter, 2017-11-23 Contemporary High Performance Computing From Petascale toward Exascale focuses on the ecosystems surrounding the world s leading centers for high performance computing HPC It covers many of the important factors involved in each ecosystem computer architectures software applications facilities and sponsors The first part of the book examines significant trends in HPC systems including computer architectures applications performance and software It discusses the growth from terascale to petascale computing and the influence of the TOP500 and Green500 lists The second part of the book provides a comprehensive overview of 18 HPC ecosystems from around the world Each chapter in this section describes programmatic motivation for HPC and their important applications a flagship HPC system overview covering computer architecture system software programming systems storage visualization and analytics support and an overview of their data

center facility The last part of the book addresses the role of clouds and grids in HPC including chapters on the Magellan FutureGrid and LLGrid projects With contributions from top researchers directly involved in designing deploying and using these supercomputing systems this book captures a global picture of the state of the art in HPC
