TRANSFORMING INDUSTRIES WITH AI: EXPLORING THE UPSIDES AND DOWNSIDES OF EMERGING TECHNOLOGY

Bechoo Lal, Mr. Ajay Jaiswal, Mohit Tiwari, Dr. Haewon Byeon, 2023-08-21 In the current day and age of technology buzzwords such as artificial intelligence AI the internet of things IoT and cloud computing are often used AI is the technology that tries to make computers or other machines equal to the human brain making them capable of learning and problem solving in the same way that humans do Applications based on AI may be readily connected with other developing technologies such as the Internet of Things IoT the cloud Big Data and Blockchain The Internet of Things refers to a network of interconnected internet enabled items or things that are able to gather and share data with one another In recognition of the idea of the Internet of items a significant number of tangible items are now being connected with the internet at an exceptionally rapid pace By the year 2025 there will be more than 30 billion Internet of Things connections with approximately four Internet of Things devices per person on average according to reports and current trends Cloud computing provides a means through which the huge amounts of data created by these Internet of Things applications may be sent to their respective endpoints The use of cloud computing is widely acknowledged to be a facility for the processing and storage of data Just in time processing and lightning fast response times are necessities for any and all real time applications that make use of the Internet of Things Researchers academics and industrialists in the fields of health care agriculture telecommunications online and mobile commerce and transportation have shown a significant amount of interest in AI and IoT based data In today's world AI based methodologies increase the role that IoT plays in business monitoring health care monitoring illness prediction bioinformatics research and development stock market prediction social network analysis weather analysis agriculture transportation and resource optimization The implementation of these applications needs a certain amount of processing capability as well as data storage both of which are often given by cloud based services The data that has been saved is processed in a high precision and just in time way with the help of AI algorithms The cloud is a strong instrument that can send data not only via the standard channels of the internet but also through a dedicated direct connection The Internet of Things becomes the source of creating enormous amounts of data and the cloud becomes an essential component for data storage As a result the Internet of Things and clouds have become deeply

intertwined in order to provide commercial business services 1 Page This configuration is sometimes referred to as cloud based IoT As a result of their success in providing cloud based Internet of Things IoT services companies like Amazon Web Services AWS Google and Microsoft have become industry leaders This makes the task much more rewarding In addition the cloud based Internet of items is utilized to link a broad variety of intelligent items for usage in different applications Artificial intelligence AI the internet of things IoT and cloud computing all play significant roles in a variety of domains in the present and will continue to do so in the future The goal of AI is to analyze and collect the data produced through cloud based Internet of Things devices by gathering data from a variety of businesses Integrating AI IoT and the cloud has resulted in a transformation of both the entire storage capacity and the digital world and as a result it has become a subject of intense interest among academics and academicians The purpose of this chapter is to place an emphasis on the function that AI plays in data storage that is based on the cloud and IoT The remaining parts of the chapter are broken down into the following sections storing of data on the cloud is the primary emphasis examines the function that IoT plays in cloud environments In addition the part that AI plays in the Internet of Things IoT and cloud data storage is discussed in Section 6 brings the chapter to a close by discussing the applications of AI IoT and clouds in a variety of industries Artificial Intelligence for Digitising Industry Applications Ovidiu Vermesan, 2022-09-01 This book provides in depth insights into use cases implementing artificial intelligence AI applications at the edge It covers new ideas concepts research and innovation to enable the development and deployment of AI the industrial internet of things IIoT edge computing and digital twin technologies in industrial environments The work is based on the research results and activities of the AI4DI project including an overview of industrial use cases research technological innovation validation and deployment This book s sections build on the research development and innovative ideas elaborated for applications in five industries automotive semiconductor industrial machinery food and beverage and transportation The articles included under each of these five industrial sectors discuss AI based methods techniques models algorithms and supporting technologies such as IIoT edge computing digital twins collaborative robots silicon born AI circuit concepts neuromorphic architectures and augmented intelligence that are anticipating the development of Industry 5.0 Automotive applications cover use cases addressing AI based solutions for inbound logistics and assembly process optimisation autonomous reconfigurable battery systems virtual AI training platforms for robot learning autonomous mobile robotic agents and predictive maintenance for machines on the level of a digital twin AI based technologies and applications in the semiconductor manufacturing industry address use cases related to AI based failure modes and effects analysis assistants neural networks for predicting critical 3D dimensions in MEMS inertial sensors machine vision systems developed in the wafer inspection production line semiconductor wafer fault classifications automatic inspection of scanning electron microscope cross section images for technology verification anomaly detection on wire bond process trace data and optical inspection The use cases presented for machinery and industrial

equipment industry applications cover topics related to wood machinery with the perception of the surrounding environment and intelligent robot applications AI IIoT and robotics solutions are highlighted for the food and beverage industry presenting use cases addressing novel AI based environmental monitoring autonomous environment aware quality control systems for Champagne production and production process optimisation and predictive maintenance for soybeans manufacturing For the transportation sector the use cases presented cover the mobility as a service development of AI based fleet management for supporting multimodal transport This book highlights the significant technological challenges that AI application developments in industrial sectors are facing presenting several research challenges and open issues that should guide future development for evolution towards an environment friendly Industry 5.0 The challenges presented for AI based applications in industrial environments include issues related to complexity multidisciplinary and heterogeneity convergence of AI with other technologies energy consumption and efficiency knowledge acquisition reasoning with limited data fusion of heterogeneous data availability of reliable data sets verification validation and testing for decision making processes

Machine Learning for Complex and Unmanned Systems Jose Martinez-Carranza, Everardo Inzunza-Gonzalez, Enrique Efren Garcia-Guerrero, Esteban Tlelo-Cuautle, 2024-02-21 This book highlights applications that include machine learning methods to enhance new developments in complex and unmanned systems The contents are organized from the applications requiring few methods to the ones combining different methods and discussing their development and hardware software implementation The book includes two parts the first one collects machine learning applications in complex systems mainly discussing developments highlighting their modeling and simulation and hardware implementation The second part collects applications of machine learning in unmanned systems including optimization and case studies in submarines drones and robots The chapters discuss miscellaneous applications required by both complex and unmanned systems in the areas of artificial intelligence cryptography embedded hardware electronics the Internet of Things and healthcare Each chapter provides guidelines and details of different methods that can be reproduced in hardware software and discusses future research Features Provides details of applications using machine learning methods to solve real problems in engineering Discusses new developments in the areas of complex and unmanned systems Includes details of hardware software implementation of machine learning methods Includes examples of applications of different machine learning methods for future lines for research in the hot topic areas of submarines drones robots cryptography electronics healthcare and the Internet of Things This book can be used by graduate students industrial and academic professionals to examine real case studies in applying machine learning in the areas of modeling simulation and optimization of complex systems cryptography electronics healthcare control systems Internet of Things security and unmanned systems such as submarines drones and robots
